together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one MI3 subclone: and the assembly was confirmed by restriction digest. The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; WP:, WORMPEP; Information on the WORMPEP
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence was generated from part of bacterial clone contigs of human chromosome 1, constructed by the Sanger Centre Chromosome 1 Mapping Group. It currently consists of 5 contigs. Gaps between the contigs are represented as runs of N. The order of the pieces is believed to be correct as given, however the sizes of the gaps between them are based on estimates that have provided by the submittor.

* This sequence will be replaced

* by the finished sequence as soon as it is available and the accession number will be preserved.

It currently
* Consists of 2 contigs. Gaps between the contigs
* are represented as runs of N. The order of the pleces
* is believed to be correct as given, however the sizes
* of the gaps between them are based on estimates that have
* provided by the submittor.
* This sequence will be replaced
* by the finished sequence as soon as it is available and
* the accession number will be preserved.

* 57585 57684: contig of 57584 bp in length

                                                                                                       The present invention describes a method for diagnosing the presence of colon cancer in a patient. The method comprises mesuring levels of colon specific gene markers (CSG) in cells, tissues or bodily fluids, and comparing the measured levels of CSG with levels of CSG from a normal human control, where an increase in measured CSG from a patient versus control is associated with the presence of colon cancer. AAZ95379 to AAZ95381 represent human CSG sequences. The method is used to detect, monitor, stage or give a prognosis for colon cancer. Antibodies against CSGs are used for detection or image localisation of the CSGs. The antibodies can be conjugated to cytotoxic agent or drug and used to treat colon cancer. The method of the invention is more accurate than prior art clinical methods for staging colon cancer, because it measures colon specific markers, and, unlike pathological staging methods, do not depend on an invasive procedure.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        300

Sequences AAF32638 - AAF32689 represent cDNA encoding human intracellular signalling molecules INTRA1 - INTRA52, represented in AAF842638 - AAF64420, Modulators of the intracellular signalling molecules of the invention exhibit immunosuppressive; cytostatic; neuroprotective; of the invention exhibit immunosuppressive; cytostatic; neuroprotective; neuroperic; antibacterial; antifungal; antibaristic; neuroperic antibacterial; antifungal; antiviral; antiparssitic; antibacterial; antifungal; antiviral; antiparssitic; antibacterial; antiparssitic in antiviral; antiparssitic; antiparssitic agonists and antagonists are useful for the treatment of a condition associated with abnormal INTRA expression of functional INTRA. Disorders associated with abnormal INTRA expression of activity include cell proliferative disorders e.g. arteriosclerosis and cancers; autoimmune or inflammatory disorders e.g. Addison's disease and acquired immunodeficiency syndrome (AIDS); viral, bacterial, fungal, parasitic, protozoal and helminthic infections; gastrointestinal disorders e.g. cyclepsy and Parkinson's disease; prion diseases e.g. Creutzfeldt.Jakob disease and mental disorders e.g. anxiety, schizophrenia and Tourette's disease and mental disorders e.g. anxiety, schizophrenia and Tourette's useful in the diagnosis of the above disorders.
                                                                                                 cytostatic; neuroprotective; nootropic; antiarteriosclerotic; cancer; antinflammatory; anti-HIV; neuroleptic; antibacterial; antifungal; antiparaitic; antibelminthic; antiparkinsonian; AIDS; cell proliferative disorder; arteriosclerosis autoimmune; epilepsy; inflammatory disorder; Addison's disease; gastrointestinal disorder; neurological disorder; parkinson's disease; Creutzfeldt-Jakob disease;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 human intracellular signaling molecules, useful for the diagnosis,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             716
                                                                                                      of colon cancer. The invention provides claimed methods of diagnosing colon cancer, diagnosing metastasis of colon cancer, staging colon cancer, monitoring colon cancer for the onset of metastasis, and monitoring a change in stage of colon cancer in a patient, by determining the level of a CSG in a sample of cells, tissues or body fluid and comparing it with the level in a corresponding sample from a healthy human control or from a sample taken previously from the patient. Also claimed are methods of identifying therapeutic agents for use in imaging and treating colon cancer. Treatment may involve administering a compound which downregulates expression or activity of a CSG. Adoptive immunotherapy and gene therapy methods may be used. A claimed covactine for treating colon cancer comprises a claimed CSG.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                120

```
novel central nervous system protect in (1) and polypeptides (111) encoded by (1), are used to treat a medical conditions and in diagnosis of a pathological condition. Disorders which are diagnosed or treated include autoimmune diseases e.g. rheumatoid arthritis, hyperproliferative disorders e.g. neoplasms of the breast or liver, cardiovascular disorders e.g. cerebral isohaemia, andioidenesis, nervous system disorders e.g. Alzheimer's disease and ampiogenesis, nervous system disorders e.g. Alzheimer's disease and ampiogenesis, nervous system disorders e.g. Alzheimer's disease and campiocerial infection, gastrointestinal disorders e.g. dysphagia, cancer infection, gastrointestinal disorders e.g. dysphagia, adenocarcinomas and irritable bowel syndrome, reproductive system of isorders e.g. corneal infection as the callular level e.g. can pituitary dwarfism, cancers and disorders e.g. diabetes can disorders e.g. nonallergic rhinitis, renal disorders e.g. cespiratory disorders e.g. nonallergic rhinitis, renal disorders e.g. cette kinney failure and blood related disorders e.g. myocardial ciffarction. The polypeptides can also be used to aid wound healing and continent tissues, to regenerate tissues and in chemotaxis. The colypeptides can also be used and in chemotaxis. The colypeptides can also be used as a food additive or preservative to increase or decrease storage capabilities, fat content, lipid, protein,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention describes an isolated nucleic acid molecule (I) encoding

AAH32943 to AAH37195 and AAG73514 to AAG77788 represent human colon cancer associated nucleic acid molecules (N) and proteins (P), where cancer antigens. The colon cancer antigens have cytostatic acid to an east in gene cancer to the production. N and P may be used in the prevention, conceression. For example, N and P may be used to treat disorders associated with decreased expression by rectifying mutations or deletions cancerive proteins or to supplement the patients own production of P. Additionally, N may be used to produce the colon cancer-associated Ps. Concertal carcing the nucleic acids into a host cell and culturing the cell of colorectal carcinomas and cancers. The invention relates to novel isolated polypeptides (I), and polynucleotides (II). (I), (II) and the antibody to (I) are useful for diagnosing, preventing and treating diseases including immune system clasorders (e.g. congenital and acquired immunodeficiencies, autoimmune disorders (e.g. rheumatoid arthritis), inflammatory conditions, organ transplant rejections and graft versus host diseases, infectious diseases (e.g. hepatitis C), bleeding disorders, haemoglobin abnormalities and other blood related disorders (struckers, primary haematopoletic disorders, hyperproliferative disorders (e.g. daucher's disease, Parkinson's disease), chromosomal abnormalities (Down syndrome), ischaemic injury (e.g. stroke), renal disorders (e.g. glomentulonephritis), cardiovascular disorders (e.g. arrhythmia), respiratory disorders, dermatological disorders; in wound healing, epithelial cell proliferation, endocrine disorders; (e.g. arrhythmia), respiratory disorders, dermatological disorders; in wound healing, epithelial cell proliferation, endocrine disorders; and as stimulators of B-cell responsiveness to pathogens, activators of truckers of the transpired of the proposition of the proposition of the transpired of the proposition of the transpired of the proposition of the proposition of the proposition of the proposition of the proposit
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Novel polypeptides useful for diagnosing, treating, preventing and/or prognosing disorders related to the proteins, including cancers, immune
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            tumour proliferation in pathologies e.g. acquired immune deficiency syndrome (AIDS). AAS26976-AAS27850 represent novel signal transduction pathway protein coding sequences and PCR primers of the invention.

Novel polypeptides useful for diagnosing, treating, preventing and/or prognosing disorders related to the proteins, including cancers, immune disorders and neuronal disorders

Claim 1; SEQ ID No 143; 880pp; English.

The invention relates to novel isolated polypeptides (I), and polynucleotides (II). (I), (II) and the antibody to (I) are useful for diagnosing, preventing and treating diseases including immune system disorders (e.g. congenital and acquired immunodeficiencies, autoimmune disorders (e.g rheumatoid arthritis), inflammatory conditions, organ transplant rejections and graft versus host disease, infectious diseases

BP

```
cterg. hepatitis C), bleeding disorders, haemoglobin abnormalities and other blood-related disorders (sickle cell anaemia), myeloproliferative disorders, primary haematopoletic disorders, hyperproliferative disorders (e.g. Gaucher's disease and cancer), neurodegenerative disorders (e.g. Alzheimer's disease, Parkinson's disease), chromosomal abnormalities (Down syndrome), ischaemic injury (e.g. stroke), renal disorders (e.g. glomerulonephritis), cardiovascular disorders; (e.g. arrhythmia), respiratory disorders, dermatological disorders; wound healing, epithelial cell proliferation, endocrine disorders (e.g. Addison's disease), reproductive system disorders (cirrhosis), as stimulators of B.cell responsiveness to pathogens, activators of T-cells, to induce higher affinity antibodies, and as a means to induce tumour proliferation in pathologies e.g. acquired immune deficiency syndrome (AIDS). AAS26976-AAS27860 represent novel signal transduction. pathway protein coding sequences and PCR primers of the invention.
                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 GGAGCATTATGCCTAGGCTTGTCAAGAATCTGTTCAGTCCCTCCTTCTCAATAAAG 1674

The invention describes an isolated nucleic acid molecule (I) encoding a novel central nervous system protein. (I) and polypeptides (III) encoded to novel central nervous system protein. (I) and polypeptides (III) encoded to perhological condition. Disorders which are disquessed or treated include autoimmune diseases e.g. rheumatoid arthritis, hyperproliferative cartoins respirately carebrases or liver, cardiovascular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. cardiac arrest, solarons in floations e.g. Alzheimer's disease and amplotrophic lateral system disorders e.g. Alzheimer's disease and amplotrophic lateral sclerosis, infections caused by bacteria, viruses e.g. corneal infection, gastrointestinal disorders e.g. dysphagia.

CC e.g. corneal infection, gastrointestinal disorders e.g. dysphagia.

CC disorders e.g. testicular feminisation endocrine disorders e.g. diabetes and pituitary dwarfism, cancers and disorders at the cellular level e.g. caute kidney failure and blood related disorders e.g. myocardial

CC epithelial cell proliferation, to prevent skin aging due to subburn, to mintain organs before transplantation, for supporting cell culture of primary tissues, to regenerate tissues and in chemotaxis. The proliferation or prevent skin engage or primary tissues, to regenerate tissues and in chemotaxis. The proliferation or prevent skin engage propertive or preservative to prevent in the prolypertives or also be used as a food additive or preservative to prevent intervent to contain the prolypertices can also be used to support the propertion or prevent skin engage processing the propertion or prevent skin engage processing the propertion or prevents and the propertive or prevents in the propertion or prevents the contained to prevents the contained to prevents the contained to be used to support the propertion or prevents and the propertion or prevents the propertion or prevents the propertion or prevents the propertion or prevents the prope
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           increase or decrease storage capabilities, fat content, lipid, protein

Ή,
progression of liver cancer, hepatocellular carcinoma or metastatic liver tumour in a patient, and differentiating metastatic liver cancer from hepatocellular carcinoma in a patient, involving detecting the level of expression of two or more genes represented in ABN95503-ABN97455 in a tissue sample. The method of the invention has hepatocropic, and cytostatic activity. The method is useful for diagnosing and detecting the progression of liver cancer, hepatocellular carcinoma and metastatic liver carcinoma in a patient. The method is useful for identifying expression profiles which serve as useful diagnostic markers as well as markers that can be used to monitor disease states, disease progression, drug efficacy and drug metabolism. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Human; digestive system antigen; gene therapy; cancer; appendicitis; ulcerative colitis; infection; Hirschsprung's disease; chronic colitis; digestive system disorder; Meckel's diverticulum; ss.

                                                           The present invention provides the protein and coding sequences of a number of human digestive system antigens. These can be used in the diagnosis, treatment and prevention of disestive system disorders, including cancer, Meckel's diverticulum, bacterial or parasitic infections, appendictis, Hirschsprung's disease, chronic colitis or ulcerative colltis. The present sequence is a cDNA encoding a digestive system antigen of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             58 ACCTCGACTTGGAGGCCTTCAGCCAGGCCAGGACGATGGAGGGGGGCCTGCTATGGAAAG 117

The invention describes an isolated nucleic acid molecule (I) encoding a novel central nervous system protein. (I) and polypeptides (III) encoded to pathological conditions and in diagnosis of a pathological condition. Bisorders and in diagnosis of a utoimmune diseases e.g. rheumatoid arthritis, hyperproliferative autoimmune diseases e.g. rheumatoid arthritis, hyperproliferative care incoplasms of the breast or liver, cardiovascular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. angiogenesis, nervous system disorders e.g. Alzheimer's disease and amylotrophic lateral sclerosis, infections caused by bacterial viruses e.g. corneal infection, gastrointestinal disorders e.g. dysphagia.

C. g. corneal infection, gastrointestinal disorders e.g. dysphagia.

C. denocarcinomas and irritable bowel syndrome, reproductive system disorders e.g. testicular feminisation, endocrine disorders e.g. diabetes and pitultary dwarfism, cancers and disorders at the cellular level e.g. cepiratory disorders involving neovascularisation e.g. malignancies, respiratory disorders e.g. nonallergic rhinitis, renal disorders e.g. cepiratory disorders e.g. nonallergic rhinitis, renal disorders e.g. infarction. The polypeptides can also be used to aid wound healing and epithelial cell proliferation, to prevent skin aging due to sunburn, to maintain organs before transplantation, for supporting cell culture of primary tissues, to regenerate tissues and in chemotaxis. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         polypeptides can also be used as a food additive or preservative to

cancerous state of a mammalian call, comprising detecting at least one differentially expressed gene product in a test sample from a call suspected of being cancerous, where the gene product is encoded by one of the 5248 polynucleotide sequences given in AAZ1253 to AAZ1779. The polynucleotides can be used as a source of primers and probes, which can be used for a variety of purpose, e.g. detection of expression levels, mapping, tissue typing or profiling, forensics, genetic analysis and detection of polymorphisms. Polypeptides encoded by the polynucleotides can be used for raising antibodies for experimental, diagnostic and therapeutic purposes. The polynucleotides encoded by the polynucleotides for experimental, diagnostic and therapeutic purposes. The polynucleotides may also be used to construct arrays for diagnostics (which may be used to determine function of an encoded protein); and to detect differences in expression levels between two cells (e.g. to identify abnormal or diseased tissue in a human, to identify a genetic predisposition or susceptibility to a disease such as cancer). The polynucleotides of the invention are especially used in the diagnosis, prognosis and management of colorectal cancer, breast cancer, contile analogues and antanomists.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention describes a library of human polynucleotides comprising the sequences given in AAZ12532 to AAZ1779. Also described is a method of detecting differentially expressed genes correlated with the

The invention relates to novel isolated polypeptides (I), and depolyncieotides (II). (II) and the antibody to (I) are useful for diagnosing, preventing and treating diseases including immune system disorders (e.g. congenital and acquired immunodeficiencies, autoimmune disorders (e.g. rheumatoid arthritis), inflammatory conditions, organ transplant rejections and graft versus host disease, infectious diseases (e.g. hepatitis C). bleeding disorders, haemoglobin abnormalities and other blood-related disorders (sickle cell anaemia), myeloproliferative disorders, primary haematopoletic disorders, hyperproliferative disorders (e.g. Alzheimer's disease, Parkinson's disease), chromosomal abnormalities (Down syndrome), ischemic injury (e.g. stroke), renal disorders (e.g. qlomerulonephritis), cardiovascular disorders (e.g. qlomerulonephritis), cardiovascular disorders (e.g. arrhythmia), respiratory disorders, dermatological disorders, in
